

Week 1 – Project Orientation & Backend Setup

Summary:

This week focused on understanding the project goals and setting up the backend environment. The training began with an overview of the **Multi-Language Compiler System**, including the languages supported and the architecture design.

Key Activities:

- Orientation on project scope and compiler concepts.
- Installation and configuration of **WSL2, Python, and required libraries**.
- Basic setup of **FastAPI** for backend service.
- Creation of **project folder structure** and initial API endpoint testing.

Technologies Used: Python, FastAPI, Linux (WSL2), Git

Outcome:

The backend environment was successfully set up with all required pre-installed libraries. Initial FastAPI endpoints were tested and functional.
