

Week 11 – Advanced Library Testing & Graphics Support

Summary:

Week 11 focused on **testing graphical and computational libraries** to ensure backend execution supports programs with **graphs, plots, and calculations**.

Key Activities:

- Tested Python programs using **Matplotlib, NumPy**, inside Docker container.
- Verified execution of programs requiring **graphical output** and interactive UI components.
- Documented success and failure cases for all libraries.
- Ensured backend handled outputs correctly and isolated each program execution.

Technologies Used: Python, Matplotlib, NumPy, OpenCV(headless) ,FastAPI, Docker

Outcome:

Backend can execute **graphical and computational programs reliably**, supporting future frontend integration for visualization.
