

Week 15 – Execution Logging & Monitoring

Summary:

Week 15 focused on **implementing detailed execution logs** and monitoring tools for better backend management.

Key Activities:

- Added **execution logs** for each submitted program, including time, language, and resource usage.
- Monitored **CPU, memory, and container status** during execution.
- Configured logging for **compilation errors and runtime exceptions**.
- Prepared weekly **report summaries** for backend performance.

Technologies Used: Python, FastAPI, Docker, Logging Libraries, WSL2

Outcome:

Backend now has **comprehensive logging and monitoring**, which ensures transparency and easier debugging.
