

Week 24 – Final Review & Training Conclusion

Summary:

This week involved final review of the backend system and completion of the training diary.

Key Work Performed:

- Performed final testing of all backend features.
- Verified Docker containers, API endpoints, and execution workflow.
- Consolidated weekly diary content for six months.
- Prepared final submission for training evaluation.

Technologies Used:

Python, FastAPI, Docker, WSL2

Outcome:

The multi-language compiler backend was fully functional, stable, and well-documented. Frontend implementation remains proposed for future development.
